## HOW TO INSTALL PERRLA

After downloading and clicking Run, or double-clicking PERRLA.MSI, depending on your operating system and web browser, you may see a warning or two asking if you are sure you want to run this executable file. **Please click OK to continue.** PERRLA makes sure that the file is safe... you can trust this file.

When you see the Welcome screen with the PERRLA logo, you're on your way.

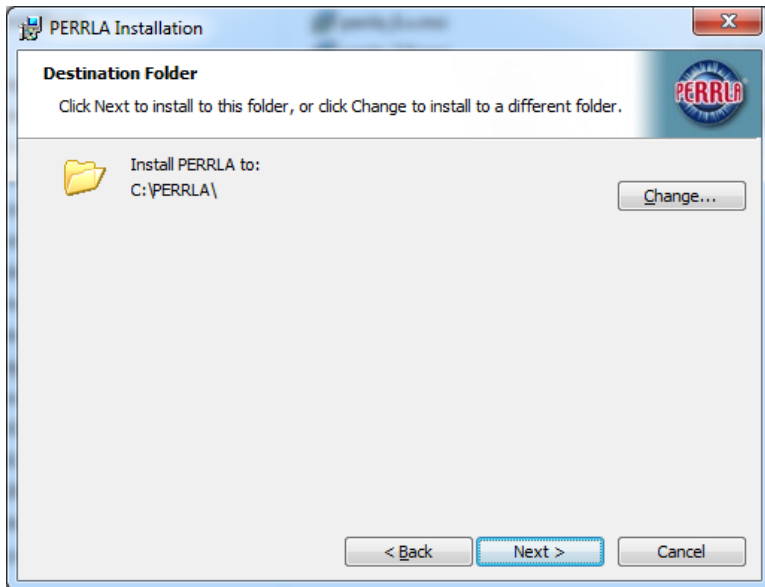

You will see several screens during the installation process. After reading each screen, click on the Next button in the lower right hand corner to continue.

The next screen is the PERRLA End User License Agreement. This screen tells you that PERRLA is copyrighted software and is licensed to you for your use only. This is a standard software license agreement and contains no surprises. To continue with the installation, you must click the radio button to accept the terms in the license agreement.

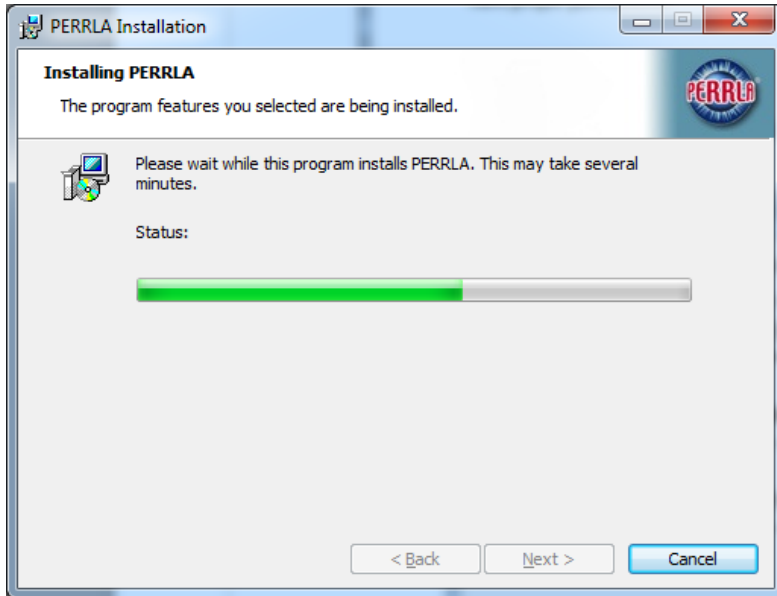

You are now shown the default location on your computer where the software will be installed. It's not recommended that you change this location unless you feel that you have a good reason.

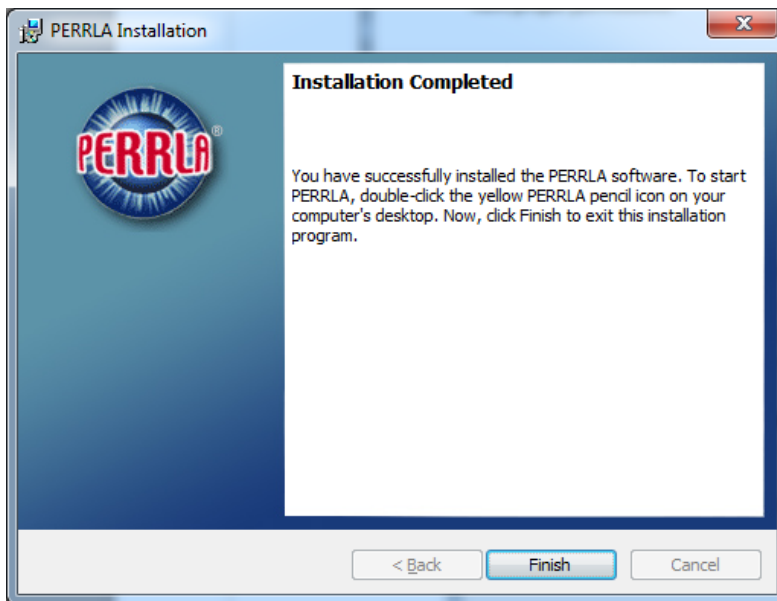

After this, the installation program has gathered all of the information that it needs. Click Next to continue.

The next screen will show a progress bar as the PERRLA software is installed.

When installation is complete, the final screen tells you that the installation was successful.

Click Finish.

You may now close the installation wizard and you're ready to start PERRLA.

To start PERRLA, double-click the yellow PERRLA pencil icon that is now present on your computer's desktop.
